

FUEL GELLING & CLOGGED FILTERS

Two phrases you do ***not*** want to hear or worry about when it comes to biodiesel. From heating homes to operating diesel engines, ValvTect Diesel Guard™ Biodiesel Anti-Gel Deicer has you covered!

- ▶ Formulated specifically for biodiesel blends up to B20
- ▶ Heavy wax modifiers and cold flow improvers provide superior cold weather operability
- ▶ Reduces cold filter plug point
- ▶ Lowers the water freeze point to as low as -50°F
- ▶ Prevents ice buildup in filters
- ▶ Eliminates the need for BTU-robbing No. 1 diesel and kerosene blending
- ▶ Helps meet alternative fuel mandates

Biodiesel is more difficult to treat than standard diesel due to different wax packages, cold weather operation issues, and higher water content. Diesel Guard Biodiesel Anti-Gel Deicer stands above the rest as it is formulated specifically to combat the known issues caused by biodiesel blending.

This proprietary blend offers superior cold weather operability using VT330A™ cold flow improvers and heavy wax modifiers that lower the cold filter plug point and break down of heavier waxes in biodiesel. This keeps the ice crystals and gelled wax particles from forming and clogging filters. Our non-alcohol "SMART" deicer lowers the freeze point and absorbs less water than other deicers. This results in less water in your fuel tanks and filters, preventing ice buildup and corrosion.

Rely on the biodiesel experts at ValvTect Petroleum Products to keep the green initiative moving forward for your home or business!
